SKILLS

Fullstack

System Architecture

Software Design

Python

Node.js

AWS

PostgreSQL/MySQL

REST API

Pandas

React

Javascript

AI development (Claude Code)

Playwright

PROFILE

Experienced and passionate Software Engineer with 10 years of experience in developing cutting-edge systems within the software development industry. Proficient in leading development projects with a creative and performance-oriented approach. Demonstrates exceptional organizational abilities and a customer-focused mindset. Proven expertise in project management and team leadership.

EXPERIENCE

Fullcast · Full Stack Engineer · Remote

2026-02 - Current

Integrate and maintain revenue ops systems used by clients with hundreds of thousands of users. Add new features that boost revenue operations, creating the code and architecture of the code, DB and system in NodeJS, React and AWS. Use and create AI features to improve user experience and feature range. Heavy focus on AI development: helped create an AI QA bot via QA skills, context engineering and Playwright for a feedback loop, all via Claude.

Mismo

2024-08 - 2026-01

Implemented solutions to a variety of projects that use Python with pandas to manipulate/generate excel files and go lang in a AWS environment for creating REST APIs that directly made an impact on the clients in a B2B oriented company.

EXPERIENCE

JBS Custom Software Solutions

2022-01 - 2024-08

Created architecture using microservices and AWS Lambdas, enabling internal API communication. Integrated WebRTC for real-time peer-to-peer communication, alongside services querying SageMaker, S3, and Redshift via Python. Used FastAPI, Auth0, and SQLAlchemy to build secure, scalable APIs—selecting each tool after evaluating and contrasting alternatives.

Immerso

2020-08 - 2022-02

CTO of the startup, in charge of talking to the client and finding a web VR/AR and tourism related solution to their problem, then making it a reality via a team of developers and designers I lead.

Growth Acceleration Partners

2021-08 - Current

Worked closely with other software engineers, UI designers, project managers and devops to deliver high availability solutions for mission critical applications. From a very interactive chatbot to individual components used in a dashboard, all using some of the following technologies: Python, ReactJS, NodeJS, GraphQL and Django

First Factory

2020-10 - 2021-08

Developed a frontend software solution to reusing individual components which helps the company sell singular components of a website (such as a login, subscriptions manager, etc.) instead of a whole webpage. Having developed the frontend in angular, backend in ruby on rails with some python scripting and, adding QA automation tests for both and feeding it all into a CI/CD pipeline made in gitlab.

IVR Software Solutions

2017-03 - 2020-09

Design software solutions for internal IVRs and IVR related APIs in AWS. From modifying legacy Java code to creating IVRs from scratch in Python, utilizing Restful APIs, SOAP APIs, PCI policies to provide quality software development.
